DIEGO CORRALES

Tampa, FL | corralesdiego05@gmail.com | +1 (813) 820-7511 | linkedin.com/in/diegojcorrales | github.com/crdz05 | crdz05.github.io

EDUCATION

Bachelor of Science in Computer Engineering Expected: Dec 2027
University of South Florida (USF) — Tampa, FL GPA: 3.77/4.0

SKILLS

Programming Languages: Java, Python, C, C++, SQL, HTML/CSS, JSP, PHP
Frameworks & Tools: TensorFlow, Keras, Streamlit, Plotly, YOLOv8, OpenCV, Databricks, AWS SageMaker Canvas, Git, AWS, Amazon Comprehend
Languages: Spanish (Fluent), English (Fluent)

EXPERIENCE

Wadiah Company — Toronto, Canada (Remote) July 2022 – Dec 2023
Technical & Research Intern

- Researched cryptocurrency mining hardware, evaluating cost, performance, and deployment feasibility to support simultaneous mining operations across 4-5 countries
- Built comparative analyses and technical diagrams to present findings and support technical decision-making
- Purchased and configured equipment for remote employees based in Panama, ensuring devices were ready for immediate use
- Delivered ongoing remote technical support, troubleshooting hardware and software issues for distributed employees

Front Desk Assistant / Waiter — Panama City, Panama 2023 – Present
Customer Service (Informal)

- Delivered fast, reliable service to customers in a high-volume, fast-paced front-desk environment
- Managed front-desk operations and resolved customer requests in real time

Ayudinga Foundation — Panama City, Panama July 2025
Volunteer Math Tutor

- Tutored students in group settings, adapting explanations to different learning styles
- Prepared and adjusted lesson materials session-to-session to match each student's pace and comprehension

PROJECTS

AI Fruit-Ripeness Classifier — Samsung Innovation Campus Hackathon Dec 2025

- Developed a **Streamlit** GUI for an AI fruit-ripeness classifier, integrating image upload, prediction results, confidence scores, and interactive **Plotly** visualizations across 15 classes
- Debugged **Streamlit** application and classification logic during prototype testing, resolving image-rendering issues and incorrect fruit/ripeness predictions
- Built and presented a computer-vision prototype with a 5-member team, using **Python**, **TensorFlow/Keras**, and MobileNetV2 to classify 5 fruit types across 3 ripeness states

Ocean Guardian — HackUSF, University of South Florida Mar 2026

- Co-developed an ecosystem-aware computer-vision prototype for an ocean-cleanup robot with a 2-person team, directing implementation of a **YOLOv8** detection pipeline (COCO classes as marine-life proxies in the demo) to prevent unintended harm to wildlife
- Designed a proximity-based decision engine with a 7-tier priority system that blocks trash collection whenever marine life is detected near the target, using real-time bounding-box distance calculations
- Directed an AI-assisted development process, structuring the system into three modular layers (**YOLOv8** detection, decision logic, and **OpenCV** visualization) for maintainability and easy model swapping

Copa Airlines Data, Analytics & AI Hackathon — Ciudad del Saber, Panama Oct 2025

- Cleaned and prepared datasets, then built a small machine learning model in **AWS SageMaker Canvas** to extract insights from the data
- Structured a multi-stage data pipeline in **Databricks** using the Bronze-Silver-Gold medallion architecture to progressively clean and organize raw data

CERTIFICATIONS

- Artificial Intelligence Program (200 hours) — Samsung Innovation Campus (**Python** & AI)
- **AWS** (Amazon Web Services) Academy Graduate — Machine Learning for Natural Language Processing (NLP, **Amazon Comprehend**)
